

How Do I Find Controlled Vocabulary?

Answer: DTT supports FAIR data principles <https://www.go-fair.org/fair-principles/>. One component of FAIR is to ensure that data are interoperable with applications and workflows, and in particular, that “(Meta)data use vocabularies that follow FAIR principles”.

In support of this aim, DTT is developing the DTT Data Dictionary (DDD), a list of terms, metadata and endpoints used in DTT studies. The DDD is growing as data are consolidated and will be updated or extended approximately monthly. Older versions and change logs will be available. The DDD contains links to external ontologies or other external IDs where available.

DDD is available here: <https://doi.org/10.22427/NTP-DATA-002-00092-0002-0000-5>
